TAP BLAST

FULL GAME DESIGN DOCUMENT (GDD)

Mobile Casual Arcade • One-Touch Reaction • Tap / Combo / Chain / Risk & Reward

Version 1.0 • Production Design

Document Purpose

This document defines the complete gameplay, progression, UX, economy, monetization, content, audio/visual direction, analytics, technical architecture and production requirements for Tap Blast. It is intended to be usable as a working reference for a Unity development team.

1. High Concept

Tap Blast is a fast one-touch arcade game in which players tap glowing targets, build combo multipliers, avoid hazards, execute timing-perfect taps, create chain reactions, activate power-ups and chase increasingly difficult level objectives. A round is short enough for casual play but deep enough to reward mastery.

2. Design Pillars

- Instant understanding: the first interaction should teach the game without a long tutorial.
- Juicy feedback: every tap communicates success through motion, sound, score popups and particles.
- Risk and reward: valuable targets should sometimes require the player to take a calculated risk.
- Mastery: players can improve accuracy, timing, combo management and route selection.
- Progression: new mechanics appear throughout the campaign instead of only increasing speed.
- Short-session replayability: a failed round should naturally produce the desire for another attempt.
- Readable chaos: difficulty may become intense, but target identity must remain clear.

3. Core Player Experience

The intended emotional sequence:

See target -> Tap -> Pop -> Combo rises -> More targets appear -> Risk appears -> Player makes a decision -> Chain/Power activates -> Score explodes -> Reward -> 'One more try'

The player should feel increasingly powerful as the combo grows, while the presence of Bombs, timing targets and disappearing high-value targets prevents mindless tapping.

4. Game Modes

MVP recommendation: launch with Campaign + Daily Challenge. Add Endless and event modes after core retention is proven.

5. Core Round Flow

- Load level configuration.
- Show objective and reward preview for a brief moment.
- Start countdown / immediate play.
- Spawn targets according to the level pattern.
- Track taps, misses, hazards, combo, score, power-ups and objectives.
- Trigger scripted or probability-based events.
- Allow Ultimate Blast when meter reaches 100%.
- Run Final Blast phase where configured.
- Stop spawning when time expires or the level's completion condition is met.
- Calculate stars, rewards, mission progress and high-score status.

- Present result screen with replay / next level / optional reward actions.

6. Target System

7. Target Spawn Rules

- Targets must not spawn directly under critical HUD elements.
- Maintain minimum spacing between simultaneous targets unless a Chain opportunity is intentionally created.
- Avoid impossible overlaps between Bombs and required targets.
- Spawn probability is controlled per level so designers can author difficulty.
- Target lifetime prevents the arena from becoming permanently saturated.
- A difficulty curve can modify spawn rate, lifetime, size, movement speed and hazard probability independently.

8. Scoring System

Suggested base formula:

Final Tap Score = Base Target Value x Combo Multiplier x Temporary Score Multiplier + Bonuses

Designers should be able to tune these values per mode without changing gameplay code.

9. Combo System

- Every valid target tap increments the combo.
- A missed required target can reset or reduce combo depending on the level rule.
- Bomb taps immediately break combo in standard mode.
- Optional Shield can protect the combo once.
- Combo thresholds trigger increasingly strong audiovisual feedback.
- A combo should be visually obvious in the HUD at all times.

10. Chain Blast

Chain Blast is a signature system. Designers deliberately create clusters in which fast, accurate tapping can cause cascading explosions. The player is rewarded for recognizing spatial relationships.

11. Perfect Tap

- Target transitions: BIG -> MEDIUM -> SMALL -> PERFECT.
- The perfect window is visually highlighted.
- Perfect timing gives maximum score and Ultimate charge.
- Early/late taps may give reduced rewards in beginner levels.
- Advanced levels can require multiple Perfect Taps consecutively.
- Moving Perfect targets combine timing and reaction skill.

12. Bomb & Hazard System

- Bombs are visually distinct enough to be fair but should create tension.
- Bomb probability rises slowly through the campaign.
- Bombs can move, hide among clusters or appear during Frenzy in advanced levels.
- A bomb hit normally resets combo and may subtract a small score amount.
- Never create a required path that forces an unavoidable bomb tap.

13. Power-Up System

14. Ultimate Meter

The Ultimate Meter fills through successful taps, Perfect Taps, Chain Blasts and selected bonuses. At 100%, the player may activate Ultimate Blast. The button should become visually prominent without blocking targets.

- Valid tap: small charge
- Perfect: larger charge
- Chain: major charge
- Golden/Diamond: bonus charge
- Bomb: no charge
- Ultimate clears eligible normal/special targets according to level rules

15. Special Events

16. Level Design Rules

- Each level should have a clear primary objective.
- Most levels should have one secondary mastery condition.
- Introduce one new mechanic at a time.
- After introducing a mechanic, provide at least one level where it is the main focus before combining it with others.
- Boss levels should test a mechanic combination rather than simply multiplying speed.
- Difficulty spikes should be preceded by a learning level.
- The final 5–10 seconds of many levels should feel more intense than the opening.

17. 100-Level Campaign

18. Detailed Early Levels (1–20)

19. Levels 21–100: Progression Summary

Levels 21–100 should progressively combine the systems described above. Difficulty should be tuned using spawn rate, target lifetime, target size, movement speed, hazard chance, Perfect window, event frequency and objective requirements rather than only increasing speed.

20. Boss / Challenge Design

- Mini Boss: one giant target with a visible health/progress ring.
- Chain Master: requires several successful chain reactions.
- Danger Boss: bomb patterns must be navigated safely.
- Power Boss: power-up timing is central.
- Perfect Boss: multiple timing windows.
- Frenzy Boss: high-speed target waves.
- Chaos Boss: multiple mechanics simultaneously.
- Master Trial: strict accuracy and combo requirements.
- Ultimate Challenge: multi-phase 60-second finale.

21. Level 100 Ultimate Challenge

Result screen should display Score, Best Combo, Perfect Taps, Chain Count, Coins, Gems, Stars and a 'Personal Best' indicator.

22. Objectives

23. Star Rating

- 1 Star: complete the level.
- 2 Stars: exceed the score or secondary objective.
- 3 Stars: complete the mastery condition.
- Stars permanently contribute to campaign completion percentage.

24. Player Progression

Recommended progression layers:

- Campaign level unlocks
- Stars
- Player level / XP
- Coins
- Gems
- Cosmetic collection
- Daily missions
- Achievements
- High scores / personal records

25. Economy

Keep score progression independent from paid power so competitive or leaderboard results remain credible.

26. Cosmetic Collection

- Bubble skins: Neon, Fire, Ice, Galaxy, Plasma, Toxic, Rainbow, Diamond, Shadow.
- Blast effects: Basic, Lightning, Shockwave, Black Hole, Rainbow, Galaxy.
- Trails: Spark, Fire, Rainbow, Electric.
- Arena themes: Neon City, Deep Space, Ocean, Cyber, Candy, Galaxy.
- UI themes can be added later.
- Cosmetics should provide visual personalization, not unfair scoring advantages.

27. Treasure Box System

Treasure Boxes provide a collection/reward layer. Boxes can contain Coins, Gems, cosmetic fragments, complete cosmetics or temporary boosters.

- Common Box: frequent, mostly Coins.
- Rare Box: Coins + Gems + cosmetic chance.
- Epic Box: stronger cosmetic odds.
- Event Box: limited-time themed cosmetics.
- Avoid confusing or deceptive reward presentation; show clear reward categories and probabilities where required.

28. Daily Missions

- Tap 100 targets
- Reach 20x combo
- Perform 10 Perfect Taps
- Create 5 Chain Blasts
- Collect 5 Diamonds

- Finish one round without a Bomb hit

Reward example: Coins + Gems + mission XP. Rotate missions daily.

29. Daily Challenge

Every day, one curated level uses a fixed seed and rule set so players can compare their performance with their own previous attempt and, if implemented later, a leaderboard.

- Fixed target sequence/seed
- One special modifier
- Daily reward for completion
- Personal-best tracking
- Optional leaderboard after backend infrastructure is available

30. Endless / Survival Mode

- No fixed level goal.
- Difficulty continuously increases.
- Three mistakes can end the run.
- Best score becomes the main progression metric.
- Milestones can award Coins/Gems.
- Ideal for later retention content.

31. UI / Screen List

32. Gameplay HUD

Top: Score | Timer. Center: gameplay arena. Bottom: Combo and Ultimate Meter. Power-up buttons should appear only when relevant. Pause should remain accessible but not distract from targets.

33. UX Principles

- Tap targets must be large enough for comfortable mobile interaction.
- Critical targets must have distinct shapes as well as colors so color alone is not the only identifier.
- Avoid placing targets under system gesture zones.
- Use short animations that never hide the next target for too long.
- Provide haptic feedback for major events where supported.
- Use clear result messaging: NEW BEST, PERFECT, COMBO, GREAT, MISS, BOMB, etc.

34. Accessibility

- Do not rely on color alone to distinguish Bombs and valid targets.
- Offer reduced-motion mode.
- Offer vibration toggle.
- Use readable HUD typography.
- Maintain adequate contrast between targets and arena.
- Support device aspect ratios safely using responsive UI anchors.

35. Art Direction

Visual identity: dark or rich background with luminous targets, soft bloom/glow, clean HUD panels and energetic particle effects. The target should remain the visual focal point.

- Use a small controlled color family for target categories.

- Give every special target a unique silhouette/icon.
- Use particle bursts, rings, shockwaves and score popups to make successful play feel physical.
- Avoid permanent excessive glow that reduces readability.

36. Animation Requirements

37. Audio Design

- Every target type gets a recognizable sound family.
- Combo thresholds increase musical intensity.
- Perfect Tap gets a distinct high-pitch confirmation.
- Bomb gets a warning/error sound.
- Chain Blast uses layered impacts.
- Ultimate Blast gets the strongest audio event.
- Separate Music, SFX and Haptics volume controls.

38. Monetization Strategy

Do not interrupt active gameplay with ads. Rewarded ads should be clearly optional and should not punish players who decline.

39. Retention Design

- Daily missions
- Daily Challenge
- Streak rewards
- Personal best notifications
- Level stars
- Collection completion
- New mechanic unlocks
- Limited-time cosmetic events
- Achievement milestones
- Endless score chasing

40. Streak System

Players can complete at least one daily mission to maintain a streak. Streak rewards should increase modestly and reset after a missed day. Avoid overly punishing long-term players.

41. Achievements

- First 10x Combo
- First Mega Chain
- 100 Perfect Taps
- No Bomb Master
- 50x Combo
- 10,000 Total Taps
- 100 Levels Complete
- All World 3 Stars
- Ultimate Blast Master
- Personal Best Champion

42. Analytics Events

Recommended event instrumentation:

- game_start
- level_start
- level_complete
- level_fail
- level_restart
- tap_target
- tap_bomb
- miss_target
- combo_threshold
- chain_created
- perfect_tap
- powerup_used
- ultimate_used
- daily_challenge_start
- daily_challenge_complete
- mission_complete
- rewarded_ad_started
- rewarded_ad_completed
- iap_started
- iap_completed
- cosmetic_unlocked

43. Important Metrics

44. Unity Technical Architecture

45. Data-Driven Level Configuration

Use ScriptableObjects or serialized configuration assets so designers can create and balance levels without code changes.

46. Object Pooling & Performance

- Pool target objects instead of repeatedly Instantiate/Destroy during active play.
- Pool particles for frequent tap/explosion effects.
- Limit simultaneous VFX.
- Use simple colliders and avoid unnecessary physics.
- Avoid per-frame allocations in target movement and scoring.
- Test on low/mid-range Android devices before polishing high-end effects.

47. Save Data

- Current unlocked level
- Stars per level
- Best score per level
- Highest combo

- Coins
- Gems
- XP/player level
- Unlocked cosmetics
- Equipped cosmetics
- Mission progress
- Achievements
- Settings

48. Game States

Recommended state machine:

Boot -> Home -> PreLevel -> Countdown -> Playing -> Paused -> Resuming -> Results -> NextLevel / Replay -> Home

Failure can transition to Results or an optional Continue flow before Results.

49. Tutorial

- Level 1: show a single glowing target and animated tap hint.
- After first tap: explain score.
- After several taps: introduce Combo.
- Level 6: introduce Golden target.
- Level 8: introduce Time Bubble.
- Level 11: introduce Chain Blast.
- Level 16: introduce Bomb with a safe example.
- Later systems should be introduced contextually rather than through long tutorial screens.

50. Difficulty Formula

Difficulty should be a weighted combination rather than a single speed value.

Difficulty ≈ Spawn Pressure + Movement + Target Size Reduction + Hazard Density + Timing Precision + Objective Pressure

- Early worlds emphasize learning.
- Middle worlds emphasize combinations.
- Late worlds emphasize decision-making and mastery.
- When adding a difficult mechanic, temporarily reduce another difficulty dimension to keep the level fair.

51. Example 60-Second Level Timeline

52. Failure & Recovery

- Failure should be quick and understandable.
- Show the reason: TIME UP, BOMB HIT, OBJECTIVE MISSED, etc.
- Offer Replay immediately.
- Optional rewarded Continue may restore a portion of the round state.
- Never require watching an ad to continue.

53. Reward Presentation

Result order:

- Final score count-up
- Personal Best indicator

- Star reveal
- Coins / Gems
- Mission progress
- Achievement progress
- Next level unlock
- Optional rewarded bonus

54. Launch Content Plan

55. Production Milestones

- Prototype: tapping, spawning, score and timer.
- Vertical slice: polished Level 1–10 experience.
- Core systems: combo, hazards, chain, power-ups, objectives.
- Content production: 100 level configurations.
- Meta: currency, missions, collection, progression.
- Monetization: rewarded ads, interstitial rules, IAP.
- Polish: VFX, SFX, haptics, animation and UX.
- QA: device compatibility, performance, edge cases and save integrity.
- Soft launch: measure retention and difficulty.
- Global launch: optimize content and monetization from real data.

56. QA Checklist

- Targets never spawn off-screen.
- Required target never becomes impossible to tap.
- Bomb is always visually distinguishable.
- Combo resets correctly.
- Ultimate meter cannot exceed 100%.
- Power-up timers stop/reset correctly.
- Pause freezes gameplay state correctly.
- Restart clears all active targets, timers and effects.
- Level completion cannot trigger twice.
- Rewards cannot be granted twice for one completion.
- Save data survives app restart.
- Ads do not appear during active gameplay.
- All screen aspect ratios remain usable.

57. Example Level Specification

58. What Makes Tap Blast Addictive (Design Summary)

- Immediate tactile feedback.
- Visible combo escalation.
- High-value targets create risk decisions.
- Bombs punish careless tapping.
- Chain reactions reward spatial awareness.

- Perfect Tap rewards timing skill.
- Frenzy creates short bursts of intensity.
- Ultimate Blast creates a power fantasy.
- Stars and missions create completion goals.
- Cosmetics create long-term collection goals.
- Daily Challenges create a reason to return.
- Short rounds make replay friction extremely low.

59. Recommended MVP Scope

For the first playable version, do NOT build all 100 levels and all meta systems immediately. Build a polished 10-level vertical slice first.

- Normal + Golden + Bomb + Time targets
- Combo system
- Basic Chain Blast
- One power-up: Freeze
- Score and timer
- Three-star result screen
- 10 handcrafted levels
- Basic sound/VFX/haptics
- Restart/replay flow

If players enjoy replaying the 10-level slice, expand to Perfect, Frenzy, Ultimate, missions, collection and the remaining campaign.

60. Final Product Vision

Tap Blast should be extremely easy to start but progressively difficult to master. The player should always have a visible next goal: beat the score, protect the combo, create a bigger chain, hit a Perfect window, earn three stars, complete a mission, unlock a cosmetic, or beat a personal best. The strongest version of the game is not simply faster tapping—it is a readable arcade system where every tap represents a small decision and every successful sequence builds toward a spectacular payoff.

Appendix — Design Tables

Element	Definition
Genre	Casual arcade / reaction / score-chasing
Platform	Android and iOS
Orientation	Portrait
Input	Single tap
Session	30–60 seconds per normal level
Audience	Broad casual audience; easy for children, satisfying for adults
Primary KPI	Retention and repeat rounds, supported by fair monetization
Core fantasy	Tap fast, stay accurate, build an enormous combo and cause spectacular blasts

Mode	Purpose	Duration
Campaign	Primary 100-level progression	30–60 sec
Daily Challenge	Fixed challenge with rotating rules	30–60 sec
Endless / Survival	Continue until three mistakes or failure condition	Variable
Frenzy Rush	High-speed scoring mode	30 sec
Treasure Rush	Collect Coins/Gems/boxes	30 sec
Master Trial	High-skill challenge	45–60 sec

Target	Visual / Behavior	Tap Result	Default Score
Normal	Stable glowing ring/circle	Adds combo	10
Small	Smaller hit area	Adds combo	15
Bonus	Distinct high-value glow	Adds combo	25
Golden	Rare, limited lifetime	Large score	100–1,000
Time	Clock indicator	Adds time	10 + 3 sec
Diamond	Rare collectible	Adds Gems/progress	50
Rainbow	Area-effect target	Blast nearby targets	50
Perfect	Shrinks through timing states	Timing-scaled reward	50–500
Bomb	Danger target	Combo/score penalty	0
Decoy	Looks similar to a valid target in advanced levels	Penalty or no reward	0

Combo	Suggested Multiplier	Feedback
1–4	1.0x	Normal
5–9	1.25x	Small pulse
10–19	1.5x	Combo Fever
20–29	2.0x	Super Fever
30–49	3.0x	Ultra Fever
50+	4.0x+	Mastery state

Chain	Requirement	Effect
Chain 1	3 linked targets	Small area blast
Chain 2	5 linked targets	Larger blast + score bonus
Mega Chain	8+ linked targets	Large blast + strong feedback
Ultra Chain	12+ linked targets	Major score burst + Ultimate charge

Power-Up	Duration	Effect	Balance Rule
Frenzy	5–8 sec	Higher spawn rate / scoring opportunity	Short, high-risk window

Power-Up	Duration	Effect	Balance Rule
Freeze	3 sec	Stops target movement	Does not stop timer
Shield	Until hit	Absorbs one Bomb mistake	One active shield max
Double Score	5 sec	2x score	Rare
Rainbow Blast	Instant	Destroys eligible nearby targets	Limited spawn rate
Time Boost	Instant	Adds 3–5 sec	Used more often in timed levels
Ultimate Blast	Instant	Large screen clear	Requires meter charge

Event	Trigger	Player Experience
Frenzy	Timer / combo threshold	Rapid target spawning
Dark Mode	Scripted event	Arena darkens; targets glow
Freeze	Random/scripted	Targets pause temporarily
Mega Wave	Scripted	Large simultaneous target wave
Rainbow Rush	Scripted	Rainbow targets dominate
Treasure Rush	Special level	Collect as much currency as possible
Final Blast	Final 3–5 sec	High-value rapid-tap finale

World	Levels	Primary Content	Finale
World 1: Learn to Tap	1–10	Basic targets, sizes, combo, moving targets, Golden, Time Bubble	Mini Boss
World 2: Combo City	11–20	Chain Blast, clusters, combo mastery, Bomb introduction	Chain Master
World 3: Danger	21–30	Bombs, Decoys, Dark Mode, safe-zone play	Danger Boss
World 4: Power	31–40	Freeze, Frenzy, Shield, Double Score, Rainbow Blast	Power Boss
World 5: Perfect	41–50	Perfect Tap and increasingly strict timing	Perfect Boss
World 6: Frenzy	51–60	High-speed waves and hazard combinations	Frenzy Boss
World 7: Chaos	61–70	Mixed target types and combined mechanics	Chaos Boss
World 8: Treasure	71–80	Coins, Gems, Stars, Treasure Boxes	Treasure Rush
World 9: Master	81–90	No-miss, high-combo, collection and timing trials	Master Trial
World 10: Legend	91–100	Full system combinations and Ultimate mastery	Ultimate Challenge

Level	Main Mechanic	Suggested Objective
1	Normal targets	Tap 20
2	Target sizes	Score 500
3	Combo	Reach 5x
4	Small targets	Score 1,000
5	Movement	Reach 10x
6	Golden	Tap 3 Golden
7	Spawn acceleration	Score 2,000
8	Time Bubble	Collect 3
9	Combo challenge	Reach 15x
10	Mini Boss	Destroy Golden Core
11	Chain Blast	Create 2 chains
12	2-chain	Create 3 chains

Level	Main Mechanic	Suggested Objective
13	3-chain	Create 1 Mega Chain
14	Moving clusters	Score 3,000
15	Combo x3	Reach 20x
16	Bomb	Avoid all Bombs
17	Shield	Use Shield correctly
18	Chain + Bomb	Create 3 chains without Bomb hit
19	Mega Chain	Create 2 Mega Chains
20	Boss	30x combo + 5 chains

Phase	Time	Gameplay
Warm-up	0–20 sec	Normal + Golden
Danger	20–35 sec	Moving + Bomb
Frenzy	35–45 sec	Rapid spawn
Precision	45–55 sec	Perfect Tap sequence
Final Blast	55–60 sec	High-value rapid-tap wave

Objective Type	Example
Score	Reach 10,000
Combo	Reach 30x
Accuracy	Finish with 90%+ accuracy
No Miss	Do not miss a required target
No Bomb	Finish without Bomb hit
Perfect	Perform 10 Perfect Taps
Chain	Create 5 Chain Blasts
Collection	Collect 10 Diamonds
Time	Finish before timer expires
Hybrid	Reach 20x while collecting 5 Diamonds

Currency	Source	Uses
Coins	Levels, missions, ads, boxes	Common cosmetics / upgrades
Gems	Rare rewards, missions, purchases	Premium cosmetics, continues, boxes
Stars	Level performance	Campaign completion / milestone rewards
XP	Gameplay and missions	Player level / progression rewards

Screen	Purpose
Splash	Brand/logo and loading
Home	Play, progression, currency, missions, collection
World Map / Level Select	100-level campaign and stars
Pre-Level	Objective, reward and optional booster
Gameplay	Score, timer, combo, Ultimate meter, pause
Pause	Resume, restart, settings
Result	Score, stars, rewards, missions, next/replay
Collection	Bubble skins, blasts, trails, arenas
Shop	Cosmetics, Gems, bundles, Remove Ads
Daily Challenge	Daily rule and result
Settings	Sound, music, vibration, language, support

Event	Animation
Tap	Scale down -> pop -> ring burst

Event	Animation
Combo increase	HUD punch / number bounce
Golden	Pulse + rotating/radiating ring
Bomb	Warning pulse; strong but fair visual cue
Perfect	Slow micro-freeze + precision ring
Chain	Sequential blast wave
Ultimate	Short time-stretch + full-screen blast
Level complete	Confetti/particles + reward reveal

Placement	Implementation	Purpose
Rewarded Continue	After failed level	Optional revive
Rewarded Double Reward	Result screen	Double Coins
Rewarded Treasure	Optional box opening	Extra collection
Interstitial	After suitable completed rounds	Ad revenue
Remove Ads	IAP	Improve paid experience
Cosmetic Packs	IAP	Visual collection
Gem Packs	IAP	Premium currency
Starter Bundle	IAP	Early conversion offer

Day	Reward Example
1	Coins
2	Coins + XP
3	Gems
4	Treasure Box
5	Gems + cosmetic fragment
7	Rare Box / cosmetic
14+	Rotating milestone rewards

Metric	Why It Matters
D1/D7/D30 retention	Measures return behavior
Average session length	Measures engagement
Rounds per session	Measures replayability
Level completion rate	Finds difficulty spikes
Level restart rate	Finds frustrating levels
Average combo	Measures mastery
Bomb hit rate	Measures hazard fairness
Rewarded ad opt-in	Measures monetization value
IAP conversion	Measures paid appeal
Cosmetic unlock rate	Measures collection engagement

System	Responsibility
GameManager	Overall game state and round lifecycle
LevelManager	Loads level data and controls objectives
TargetSpawner	Target creation, patterns and spawn timing
TargetController	Target behavior, movement and tap handling
TargetPool	Object pooling for performance
ScoreManager	Scoring and multiplier calculations
ComboManager	Combo state and Fever thresholds
ChainBlastManager	Chain detection and blast resolution

System	Responsibility
PowerUpManager	Power-up activation and duration
UltimateManager	Ultimate meter and activation
ObjectiveManager	Level objective tracking
CurrencyManager	Coins/Gems/XP
ProgressionManager	Unlocks, stars and campaign
MissionManager	Daily missions
SaveManager	Local/cloud save abstraction
AudioManager	Music/SFX/haptics
VFXManager	Particles and screen effects
UIManager	HUD, menus and result screens
AnalyticsManager	Event tracking
AdManager	Rewarded/interstitial logic
IAPManager	Store purchases

Field	Example
LevelID	42
Duration	45
TargetScore	12000
SpawnRate	0.65 sec
MaxTargets	10
TargetTypes	Normal, Golden, Bomb, Perfect
MovementSpeed	1.5
BombChance	0.08
GoldenChance	0.05
PerfectChance	0.10
PowerUps	Freeze, Shield
Events	Frenzy at 30 sec
Objectives	12k score + 20x combo
CoinReward	250
GemReward	2

Time	Event
0–10 sec	Easy targets; establish combo
10–20 sec	Moving targets + specials
20–30 sec	Chain opportunity
30–40 sec	Difficulty increase / power-up
40–50 sec	Frenzy
50–57 sec	Rare high-value targets
57–60 sec	Final Blast

Phase	Content
MVP	30 levels, basic targets, combo, Bomb, Golden, 3 power-ups
Soft Launch	50 levels, Chain, Perfect, missions, ads, cosmetics
Global Launch	100 levels, full economy, daily challenge, collection
Post Launch	Endless, events, seasonal cosmetics, new worlds

Parameter	Example
Level	35

Parameter	Example
Duration	45 sec
Goal	8,000 score
Secondary	Reach 20x combo
Targets	Normal 65%, Golden 8%, Bomb 7%, Time 5%, Rainbow 5%, Perfect 10%
Spawn	0.75 sec
Max active	9
Movement	Medium
Event	Frenzy from 32–38 sec
Power-ups	Freeze + Double Score
3-Star condition	8,000 score + 20x + 2 chains
Reward	250 Coins + 2 Gems
